

Jimish Gajjar | Full Stack Developer | React, Node.js & Cloud Architect

Mobile: +1 (437) 766-4740 | Email: jimish2104gajjar@gmail.com | Location: Toronto, ON

LinkedIn: linkedin.com/in/jimishgajjar | Portfolio: www.jimishgajjar.com

SUMMARY

Dedicated **Full Stack Developer** with 4+ years of professional experience in **React, Node.js, and TypeScript**. Expert at architecting **cloud-native solutions** using AWS/Azure and integrating complex **microservices**. Advanced practitioner of **AI-assisted engineering** with Cursor and Copilot to maximize code quality and sprint velocity. Focused on delivering high-performance, **WCAG-compliant** enterprise platforms through clean code and Agile methodologies.

TECHNICAL SKILLS

Frontend: React, TypeScript, Next.js, Redux Toolkit, Tailwind CSS, Material UI, Storybook, HTML5/CSS3

Backend: Node.js, NestJS, Java, C# (.NET Core), PostgreSQL, MongoDB, REST/GraphQL, JWT Authentication

Cloud & DevOps: AWS (S3, Lambda, ECS), Azure, Docker, Kubernetes, GitOps, CI/CD (GitHub Actions)

AI & Tools: GitHub Copilot, Cursor AI, AI-Driven Debugging, Jest, Cypress, Git, Figma, Webpack/Vite

EDUCATION

Algonquin College, Ottawa, ON

2024 - 2025

Post Graduate Certificate in Cloud Development and Operations

CGPA: 3.94/4

Conestoga College, Milton, ON

2023 - 2024

Post Graduate Certificate in Computer Application Development

CGPA: 3.72/4

Silver Oak College of Engineering & Technology, India

2018 - 2021

Bachelor of Engineering in Information Technology

CGPA: 8.41/10

WORK EXPERIENCE

SharedStorage - Storage Marketplace (Remote)

Toronto, ON

Software Developer (Contract)

Oct 2025 - Nov 2025

- Engineered full-stack features using **React** and **TypeScript**, optimizing application response times by 20%.
- Architected scalable **Node.js** services for secure payment processing and high-traffic marketplace transactions.
- Implemented **AI-driven search algorithms** to enhance user matching, improving listing discoverability metrics.
- Optimized **AWS S3** cloud storage and CloudFront delivery for high-fidelity asset management and loading.
- Established **GitOps** workflows for streamlined CI/CD, ensuring 100% deployment reliability for new features.
- Collaborated with product owners to translate complex business logic into clean, maintainable, and modular code.
- Leveraged **AI coding tools** to automate documentation and unit testing, significantly reducing technical debt.

OpenXcell - AI Development Company

Ahmedabad, India

Software Engineer (Full Stack)

Jan 2023 - Dec 2023

- Built **enterprise SPAs** with React and Redux, managing complex states for data-intensive analytical dashboards.
- Developed high-performance **microservices** using NestJS and PostgreSQL to support global data infrastructure.
- Accelerated MVP development cycles by 30% through the strategic application of **AI code generation** tools.
- Mentored junior professionals in **clean code** practices and modern JavaScript patterns to improve team output.
- Integrated **GraphQL APIs** to optimize data transfer, reducing client-side payload sizes for mobile users.
- Designed containerized deployment strategies using **Docker** and AWS ECS for seamless platform scalability.
- Automated **visual regression testing** with AI-based validation to ensure consistent UI across all browsers.

Nexactly Solutions

Ahmedabad, India

Front-End Developer

Dec 2021 - Dec 2022

- Developed responsive React interfaces, prioritizing pixel-perfect design and efficient client-side rendering.
- Integrated **RESTful APIs** and custom hooks to synchronize real-time data for financial tracking modules.
- Utilized **AI-assisted debugging** to identify and resolve performance bottlenecks in production environments.
- Maintained **WCAG 2.1 compliance** to ensure accessible experiences for a diverse enterprise user base.
- Optimized state management using **Redux Toolkit**, ensuring predictable data flow in multi-step workflows.
- Automated deployment pipelines using **GitHub Actions**, facilitating stable and frequent software releases.
- Refined UI/UX components based on **AI-driven analytics** to minimize user drop-off and maximize engagement.

Letsbiz (Co-op)

Front-End Developer

Ahmedabad, India

Jun 2021 - Nov 2021

- Created a comprehensive **Storybook** library to standardize UI design patterns across distributed teams.
- Enhanced dashboard performance by integrating **Chart.js** for real-time scientific and business data reporting.
- Leveraged **AI-powered refactoring** to migrate legacy styles to modern, modular CSS architectures.
- Achieved 90% test coverage using **Jest** and React Testing Library for core functional components.
- Optimized build times using **Vite**, resulting in a significantly improved developer experience and local speed.
- Participated in **Agile Scrum** cycles, contributing to sprint planning and technical feasibility assessments.
- Standardized frontend documentation to ensure rapid onboarding and technical consistency across the project.

X'Pert Infotech

Jr. Web Developer

Ahmedabad, India

Jan 2020 - May 2021

- Developed responsive HTML5/CSS3 layouts for laboratory management systems and secure client portals.
- Built **Node.js API** endpoints to facilitate data flow between frontend UI and relational SQL databases.
- Integrated **AI-based reporting** widgets to automate data visualization for laboratory performance tracking.
- Identified and resolved cross-browser rendering bugs to ensure a uniform experience for enterprise users.
- Architected secure **RBAC** permission systems to manage access levels for sensitive analytical data.
- Produced detailed technical documentation to support future maintenance and feature expansion cycles.
- Optimized legacy code for modern browsers, improving load speeds and reducing server-side processing.

PROJECTS

SharedStorage - Storage Marketplace

www.sharedstorage.ca

Tech Stack: React, TypeScript, Node.js, MongoDB, AWS

- Launched a peer-to-peer storage SPA with **Google Maps** integration for location-based search.
- Engineered **Node.js** backend for automated booking logic and secure encrypted payment flows.
- Utilized **AI coding assistants** to optimize backend query performance by 30% for large datasets.
- Deployed high-availability assets via **AWS S3** and CloudFront for global user accessibility.
- Containerized full-stack services using **Docker** to ensure consistency across staging and production.
- Designed **responsive UI** components that maintained performance and clarity on all mobile devices.

TrySpeed - AI Crypto Platform

www.tryspeed.com

Tech Stack: React, GraphQL, PostgreSQL, Azure, AI

- Developed secure crypto settlement dashboards focusing on real-time transaction tracking and speed.
- Leveraged **GraphQL** for optimized data fetching, reducing over-fetching and improving UI response.
- Implemented **AI anomaly detection** to monitor transaction patterns and ensure platform security.
- Automated cloud infrastructure deployment using **Azure** and Terraform for scalable microservices.
- Visualized complex market data through custom **SVG charting** hooks and high-fidelity libraries.
- Ensured robust security protocols through integrated **JWT** and OAuth2 authentication flows.

LIMS - WaveAnalyticalLabs

www.waveanalyticallabs.com

Tech Stack: Java, React, PostgreSQL, AI Reporting

- Engineered an automated **LIMS** for sample tracking and scientific reporting in regulated labs.
- Integrated **AI-powered reporting** to automate document generation and reduce manual entry errors.
- Built analytical dashboards using **PostgreSQL** and Chart.js for high-fidelity trend visualization.
- Maintained strict data integrity through encrypted **audit logs** and role-based access control.
- Refactored legacy modules using **AI-assisted analysis**, improving system speed by 25%.
- Documented all technical architecture to support long-term maintenance and future scaling.
